## Elasticities of Demand

2.5

# Discuss the law of demand with your partner.

# What does it mean and is it true for all goods and services?

# If the price goes up significantly for these products, what will happen to their quantity demanded?

# Definitions

Goods and services are not all created equal. Some goods are very sensitive in price change while others seem to be unaffected.

**Elasticity** – The responsiveness of one variable to a change in another variable

![](_page_3_Picture_3.jpeg)

# Definitions

**Elasticity of Demand** – a measure of the responsiveness of the quantity demanded of a good or service to changes in one of the factors that determine it.

**Price Elasticity of Demand (PED)** – a measure of how much the quantity demanded of a good changes when there is a change in its own price.

![](_page_4_Picture_3.jpeg)

![](_page_4_Picture_5.jpeg)

![](_page_5_Picture_0.jpeg)

The extent to which the quantity demanded changes depends on how 'elastic' its demand is with respect to its price.

**ALSO WRITTEN AS** 

![](_page_5_Picture_5.jpeg)

PED =

![](_page_5_Picture_6.jpeg)

# Try It Out - PED

The price of train tickets decline by 10 per cent and, as a result, the quantity demanded of train tickets increases by 15 per cent

What is the PED?

![](_page_7_Picture_3.jpeg)

![](_page_7_Picture_5.jpeg)

# Try It Out

PED = -1.5

Due to inverse relationship of price and quantity demanded, PED will always be negative. However, economists typically write this in absolute value form as positive.

PED = 1.5

**This means.** for every lper cent decrease in the price of train tickets, the quantity demanded of train tickets increases 1.5per cent.

![](_page_8_Picture_6.jpeg)

# Try It Out - % Change

- 1. Price increased from \$40 to \$50.
- 2. Quantity fell to 12 from 18
- 3. Price decreased from \$600 to \$540
- 4. Quantity increased from 300 to 360
- 5. Price increased from \$80 to \$140.

#### **Price Elastic Demand**

# Inelastic

#### **General Characteristics of INelastic Goods:**

- 1.Few Close Substitutes
- 2. High Degree of necessity
- 3.Small portion of income
- 4. Addictive
- 5.Required now, rather than later (Time)
- 6.Elasticity coefficient less than 1

![](_page_12_Picture_8.jpeg)

![](_page_12_Picture_10.jpeg)

# Elastic

#### **General Characteristics of Elastic Goods:**

- 1. Many Substitutes
- 2. Luxury Goods
- 3. Large portion of income
- 4.Non-Addictive
- 5. Plenty of time to decide, not urgent
- 6. Elasticity coefficient greater than 1

![](_page_13_Figure_8.jpeg)

![](_page_13_Picture_10.jpeg)

![](_page_13_Picture_11.jpeg)

![](_page_14_Picture_0.jpeg)

#### We use PED, to determine if demand for a good is elastic or inelastic.

<b>PED</b> > ∞	<b>PED</b> > 1	$\mathbf{PED} = 0$	<b>PED &lt; 1</b>	$\mathbf{PED} = \mathbf{O}$
Perfectly Elastic	Relatively Elastic	Unitary Elastic	Relatively Inelastic	Perfectly Inelastic
Demand	Demand	Demand	Demand	Demand
A change in price leads	A change in price leads	A change in price leads	A change in price leads	A change in price leads
to	to	to	to	to
Infinite change in Qd	A proportionally larger change in Qd	A proportionally equal change in Qd	proportionally smaller change in Qd	No change in Qd

# Drawing Inelastic and Elastic Demand

# PED Examples

### Lettuce-Elastic -1.27 Gasoline- INelastic -.20 Apartment- Elastic -1.60 Medical Care- INelastic -.31 Electricity-INelastic -.13 Diamond-Elastic -2.6

![](_page_24_Picture_3.jpeg)

## PED

The price of phones increase by 10% and QD decreases by 50%.
The price of band-aids increases from \$2 to \$3 and QD decreases by 10%.
The price of gasoline increases from \$2 to \$4 and QD decreases by 1%.
The price of hamburgers increases from \$1 to \$1.25 and QD decreases by 25%.

![](_page_25_Picture_2.jpeg)

## PED

The price of hats increase by 10% and QD decreases by 50%.
The price of water increases from \$2 to \$3 and QD decreases by 10%.
The price of gasoline increases from \$2 to \$4 and QD decreases by 1%.
The price of gum increases from \$1 to \$1.25 and QD decreases by 25%.

1.Elastic = 5 2.Inelastic = 0.2 3.Inelastic = 0.01 4.Unit-elastic = 1

![](_page_26_Picture_3.jpeg)

# Another way to measure? Total Revenue Test

**How does elasticity affect Total Revenue?** 

If the demand for medicine is inelastic, what happens to TR for medicine stations if price increases?

Inelastic	Elastic		
Price – increase	Price – increase		
TR – increase	TR – decrease		
Price – decrease	Price – decrease		
TR – decrease	TR – increase		

![](_page_27_Picture_5.jpeg)

### **Unit Elastic** Price increase/decrease

TR – no change

### What happens to TR when the price of this good increases from 1.00 to 1.20? Is the demand for this good inelastic or elastic?

![](_page_28_Figure_2.jpeg)

![](_page_28_Picture_4.jpeg)

D

### The DEMAND FOR THIS GOOD is elastic. (Be sure to use correct wording) - Don't say "This good is elastic"

![](_page_29_Figure_2.jpeg)

![](_page_29_Picture_4.jpeg)

D

### What happens to TR when the price of this good increases from 11 to 13? Is the demand for this good inelastic or elastic?

![](_page_30_Figure_2.jpeg)

![](_page_30_Picture_4.jpeg)

### The DEMAND FOR THIS GOOD is inelastic. (Be sure to use correct wording) - Don't say "This good is inelastic"

![](_page_31_Figure_2.jpeg)

![](_page_31_Picture_4.jpeg)

### **Total Revenue and PED**

![](_page_32_Figure_1.jpeg)

![](_page_32_Picture_3.jpeg)

![](_page_33_Picture_0.jpeg)

### **PED and Government Decisions**

## Taxes, Subsidies, and Surpluses

![](_page_34_Picture_2.jpeg)

![](_page_34_Picture_4.jpeg)

### Before we can understand tax burdens, we must understand what a consumer and producer surplus is

![](_page_35_Picture_1.jpeg)

## **Consumer and Producer Surplus**

#### Have you ever bought something for less than you were willing to pay?

For example, if you purchased a coffee at 1 Euro instead of the 2 Euro you were willing to spend.

The name for this is economics is **CONSUMER SURPLUS - the difference between the highest price** consumers are willing and able to pay for a good and the actual price they pay. **Consumer Surplus** 

Price of Jeans (\$)

![](_page_36_Figure_4.jpeg)

Quantity of Jeans (thousands)

![](_page_36_Picture_7.jpeg)

## **Consumer and Producer Surplus**

#### This can also be true for producers.

**Producer SURPLUS - the difference between the lowest price producers are willing and able to offer the** good and the actual price that they receive for it.

![](_page_37_Figure_3.jpeg)

Quantity of Jeans (thousands)

Price of Jeans (\$)

![](_page_37_Picture_7.jpeg)

## Social/Community surplus

## The sum of the consumer surplus and producer surplus. It is the total benefit gained by society when the market is at equilibrium.

![](_page_38_Figure_2.jpeg)

Quantity of Jeans (thousands)

Price of Jeans (\$)

![](_page_38_Picture_6.jpeg)

D

20

![](_page_39_Picture_0.jpeg)

#### Whose surplus do taxes take more of? Does it depend on the good?

![](_page_39_Figure_2.jpeg)

### Taxes

# Do you think governments tax goods with inelastic demand or elastic demand more? Why?

![](_page_40_Picture_2.jpeg)

### Taxes

## Taxes on goods with INELASTIC demand, earn more revenue due to a change in price, changing Qd very little.

![](_page_41_Picture_2.jpeg)

## **Income Elasticity of Demand(YED)**

![](_page_42_Picture_1.jpeg)

# Definitions

A change in people's incomes causes an increase or decrease (a shift) in demand for a good. The extent to which the demand curve is shifted, and in which direction it will shift, is explained by the income elasticity of demand (YED).

**Income elasticity of demand (YED)** – a measure of how much the quantity demanded of a good will change in response to a change in consumers' incomes.

![](_page_43_Picture_3.jpeg)

![](_page_43_Picture_5.jpeg)

# Definitions

If Income rises by 5%, we will likely see an increase in Qd for many goods. HOWEVER, we will also see a drop in some at the same time.

**YED** tells us information regarding whether the good is a **NORMAL** or **INFERIOR** good

![](_page_44_Picture_3.jpeg)

![](_page_45_Picture_0.jpeg)

The extent to which the quantity demanded changes depends on how 'elastic' its demand is with respect to its price.

![](_page_45_Picture_2.jpeg)

Copyright Chandler Bell

### % change in quantity demanded of good x

### % change in income(Y)

![](_page_45_Picture_7.jpeg)

![](_page_46_Picture_0.jpeg)

#### Income increases 20%, and quantity decreases 15% then the good is a...

![](_page_46_Picture_2.jpeg)

![](_page_47_Picture_0.jpeg)

### Income increases 20%, and quantity decreases 15% then the good is a(n)... **INFERIOR GOOD**

![](_page_47_Picture_2.jpeg)

![](_page_48_Picture_0.jpeg)

#### If coefficient is negative (inverse relationship) then the good is inferior

#### If coefficient is positive (direct relationship) then the good is normal

![](_page_48_Picture_3.jpeg)

![](_page_48_Picture_4.jpeg)

![](_page_49_Picture_0.jpeg)

### To illustrate YED, we use an **Engel Curve**. An **Engel Curve** is used to show the relationship between income and quantity demanded.

Income in Income is placed on the vertical axis Germany Quantity demanded on the horizontal axis. (€)  $Y_2$ Y1

![](_page_49_Figure_4.jpeg)

![](_page_50_Picture_0.jpeg)

#### **Normal Good**

![](_page_50_Picture_2.jpeg)

![](_page_50_Picture_3.jpeg)

![](_page_50_Figure_5.jpeg)

![](_page_51_Picture_0.jpeg)

#### **Inferior Good**

### The quantity demanded increases as consumer income decreases. (Vice Versa)

(€)

![](_page_51_Picture_4.jpeg)

![](_page_51_Figure_6.jpeg)

## Additional Uses of YED

![](_page_52_Picture_2.jpeg)

![](_page_53_Picture_0.jpeg)

### income inelastic demand (Necessity Good)

![](_page_53_Figure_2.jpeg)

a <u>proportionally</u> smaller change in quantity demanded.

![](_page_53_Figure_4.jpeg)

# YED < -1, YED > 1

#### income elastic demand (Luxury Good)

![](_page_54_Figure_2.jpeg)

#### A change in income leads to ...

### a <u>proportionally</u> greater change in quantity demanded.

![](_page_55_Picture_0.jpeg)

### perfectly income inelastic demand (Necessity Good)

A change in income leads to ...

Income in Germany (€)

<u>no change</u> in quantity demanded. The closer the YED is to zero, the greater the necessity.

![](_page_55_Figure_6.jpeg)

![](_page_56_Picture_0.jpeg)

#### **No Classification Term – Proportional Change**

![](_page_56_Figure_2.jpeg)

#### A change in income leads to ...

## a <u>proportionally</u> equal change in quantity demanded.

# Global Citizenship

Not all countries experience Income Elasticity the same. Many areas of the world have different cultures, urbanization percentages, political factors, and income levels.

#### Example

Lower-income countries eat less meat due to its high general costs. Therefore, a change in income will likely greatly affect the quantity demanded of meat in a low-income country.

In contrast, high-income countries typically consume more meat and therefore, a change in income will likely have little/no affect on quantity demanded of meat.

![](_page_57_Picture_5.jpeg)

## HOW WOUC firms use YED in the real world?

![](_page_58_Picture_1.jpeg)

![](_page_58_Picture_2.jpeg)

![](_page_58_Picture_3.jpeg)

![](_page_58_Picture_4.jpeg)

## **Economic Growth and YED**

In times of economic growth, incomes typically rise. During an economic decline, incomes typically fall.

Given the state of the economy, businesses who know their YED can determine if their

product is an inferior or normal good and forecast sales and earnings.

![](_page_59_Picture_4.jpeg)

## **Income and Spending**

As income-level changes over time, this can cause the entire output of an economy to shift

to different sectors. Consumers will change the way they spend larger portions of their

![](_page_60_Picture_3.jpeg)

![](_page_60_Picture_5.jpeg)

# Sectors of an Economy

1. Primary - primary commodities such as agriculture, mining, forestry. 2. Secondary - goods produced from primary commodities such as clothes, cars, houses, books, paper. 3. Tertiary - goods that are not yet tangible but improve quality of life such as entertainment, travel, healthcare, insurance, education.

![](_page_61_Picture_2.jpeg)

![](_page_61_Picture_6.jpeg)

## Sectors of an Economy

- As an economy grows over time, the relative size of these sectors, as a percentage of total output in the
- economy, changes. This process is defined as Sectoral Change. Economists use YED to understand what
  - an increase in income will do to each sector.

![](_page_62_Picture_4.jpeg)

![](_page_62_Picture_6.jpeg)

![](_page_62_Picture_8.jpeg)

# Practice Question

![](_page_63_Picture_1.jpeg)

![](_page_63_Picture_3.jpeg)

## Paper 1 Part A

#### M14/3/ECONO/SP1/ENG/TZ2/XX

- Distinguish between the concepts of income elasticity of demand (YED) and (a) cross price elasticity of demand (XED).
- To what extent might the concepts of YED and XED be of significance for (b) business organizations?

![](_page_64_Figure_4.jpeg)

![](_page_64_Picture_6.jpeg)

### [10 marks]

[15 marks]

### **Check Answers**

Distinguish between the concepts of income elasticity of demand (YED) and cross price elasticity of demand (XED).

Answers **may** include:

- definitions of YED and XED
- diagrams to illustrate YED and XED
- an explanation of the features of YED and XED and how they differ in terms of calculation and interpretation
- examples of goods with different YED and XED.

![](_page_65_Picture_8.jpeg)

### [10 marks]

### **Check Answers**

#### To what extent might the concepts of YED and XED be of significance for business organizations?

**N.B.** It should be noted that definitions, theory, and examples that have already been given in part (a), and then referred to in part (b) should be rewarded.

#### Answers **may** include:

- diagrams which may be relevant to the discussion
- an explanation of the relevance of YED for business organizations in terms of normal goods/inferior goods and primary goods/manufactured goods/services; explanation of the relevance of XED for business organizations in terms of changes in prices of substitute and complements
- examples of use of the concepts in practice
- synthesis or evaluation (to what extent).

#### Command term

"To what extent" requires candidates to consider the merits or otherwise of an argument or concept.

Consideration of the merits of the concepts may include: the relative importance of the two concepts and the difficulties of obtaining an accurate measure of each in reality.

Examiners should be aware that candidates may take a different approach which, if appropriate, should be rewarded.

Opinions or conclusions should be presented clearly and should be supported by appropriate examples.
