

**Scheme of work for Option C, *Cells and energy***

| Syllabus section | Content  | Time required | Outline of lessons   | Coursebook resources  | Worksheets                   | Teacher's resources / Teaching ideas  |
|------------------|----------|---------------|--|---|------------------------------|---|
| C1               | Proteins | 1 lesson      | <ul style="list-style-type: none"> <li>Explain the four levels of protein structure; outline the structure of fibrous and globular proteins giving four examples and their functions; explain the significance of polar and non-polar amino acids in proteins</li> </ul>   | p333–336<br>Short-answer Qs p336<br>End-of-chapter Qs p356–359: Q1, Q5, Q6  | Extension: Q1                | In a mixed class this can be taught with HL Chapter 7<br><br>Practical activity: 3D modelling of protein structure<br><br>Link to ICT: simulations  |
| C2               | Enzymes  | 2 lessons     | <ul style="list-style-type: none"> <li>Describe the induced-fit model for enzyme action; explain that enzymes lower activation energy of reactions and that metabolic pathways consist of chains of enzyme-catalysed reactions</li> <li>Explain competitive and non-competitive inhibition and explain how metabolic pathways are controlled by end-product inhibition and allosteric sites</li> </ul> | p337–340<br>Short-answer Qs p340<br>End-of-chapter Qs p356–359: Q4, Q9, Q10 | Extension: Q2<br>Support: Q1 | In a mixed class this can be taught with HL Chapter 7<br><br>Link to Chapter 3: opportunity for assessed practical investigating enzyme activity<br><br>Link to ICT: data logging<br><br>Link to TOK: development of induced-fit hypothesis |

|    |                  |             |   |  |  |  |
|----|------------------|-------------|---|--|--|--|
| C3 | Cell respiration | 5–6 lessons | <ul style="list-style-type: none"> <li>• Draw and label a mitochondrion as seen using the electron microscope and identify the areas in which glycolysis, the Krebs cycle and the electron transfer chain occur; explain the relationship between the structure and the function of the mitochondrion</li> <li>• Outline the process of glycolysis and identify oxygen, hydrogen and electron loss and gain during oxidation and reduction</li> <li>• Explain aerobic respiration – the link reaction, Krebs cycle and electron transfer chain</li> <li>• Explain oxidative phosphorylation in terms of chemiosmosis</li> </ul> | p341–347<br>Short-answer<br>Qs p343,<br>p347 | Support: Q2,<br>Q3, Q6<br>Extension:<br>Q4, Q5 | <p>In a mixed class this can be taught with HL Chapter 8 and/or 3.7</p> <p>Practical activities: opportunity for assessed practical using yeast; modelling and comparing chloroplasts and mitochondria</p> |
|----|------------------|-------------|---|--|--|--|

|    |                |             |  |   |   |   |
|----|----------------|-------------|--|---|---|---|
| C4 | Photosynthesis | 5–6 lessons | <ul style="list-style-type: none"> <li>State that photosynthesis consists of light-dependent and light-independent reactions; explain the relationship between the structures of the chloroplast seen using the electron microscope and their functions; identify the sites of the reactions of photosynthesis</li> <li>Explain the light-dependent reactions including the roles of the two photosystems, photolysis of water, electron transport, cyclic and non-cyclic photophosphorylation and reduction of NADP<sup>+</sup></li> <li>Explain the light-independent reactions including the roles of RuBP, reduction of GP to TP, and NADPH + H<sup>+</sup></li> <li>Explain the relationship between action and absorption spectra of photosynthetic pigments</li> <li>Explain the concept of limiting factors using light intensity, temperature and CO<sub>2</sub> concentration as examples</li> </ul> | <p>p348–356</p> <p>Short-answer Qs p352, p356</p> <p>TOK p353</p> <p>End-of-chapter Qs p356–359: Q2, Q3, Q7, Q8, Q10, Q11</p> | <p>Support: Q2, Q3, Q4, Q5, Q6</p> <p>Extension: Q3, Q6, Q7</p> | <p>In a mixed class this can be taught with HL Chapter 8 and/or 3.8</p> <p>Practical activities: chromatography of plant pigments; opportunity for assessed practical investigating rate of photosynthesis – link to ICT if data loggers are used; opportunity for assessed practical investigating accessory pigments</p> <p>Link to TOK: crops in glasshouses</p> |
|----|----------------|-------------|--|---|---|---|

**Note:** 1 lesson = approximately 40 minutes
