

Markscheme

May 2018

Extended mathematics

On-screen examination

This markscheme is **confidential** and for the exclusive use of examiners in this examination session.

It is the property of the International Baccalaureate and must **not** be reproduced or distributed to any other person without the authorization of the IB Global Centre, Cardiff.

The following are the annotations available to use when marking responses.

Annotation	Explication	Annotation	Explication	Shortcut
	Unclear		Award 0 marks	Alt+0
	Special case		Award 1 mark	Alt+1
	Misread		Award 2 marks	Alt+2
NWS	No working shown		Award 3 marks	Alt+3
	Error carried forward		Award 4 marks	Alt+4
	Words to that effect		Award 5 marks	Alt+5
	Benefit of the doubt		Award 6 marks	Alt+6
	Answer Given		Award 7 marks	Alt+7
	Highlight tool		Award 8 marks	Alt+8
	Ellipse tool		Award 9 marks	Alt+9
	On page comment tool		Award 10 marks	
	Seen		Award 11 marks	
	Caret - Omission		Award 12 marks	
	Wavy underline tool			

The markscheme may make use of the following abbreviations:

RM Assessor has the following annotations that should be used to award marks:

A0 only use to award a zero mark for an answer that has no merit eg, awarded for the candidate that has a wrong answer with no working

NR only use when the candidate has not made any response also stamp the response with 

Marks awarded by stamping the tick

Seen; must be stamped on all blank response areas and on concatenated responses

unclear

- Bullet notation means award 1 mark – see example 1 below

ECF Marks that can be awarded as **error carried forward** from previous results in the question

BOD Benefit of the doubt

MR misread

NWS no working shown

SC special case

OE or equivalent

WTTE or words to that effect

AG Answer given

Example 1
 • 1 mark awarded and corresponding notes are aligned

b	<ul style="list-style-type: none"> • Show clear line of reasoning in the method • 4 	45 & 49 seen OE eg, $49 = 45 + x$ ACCEPT $45 + X/10 = 4.9$ and Ans 4	2
---	---	---	---

Error Carried Forward (ECF) marks

Errors made at any step of a solution affect all working that follows. In general, **Error Carried Forward (ECF)** marks are awarded after an error.

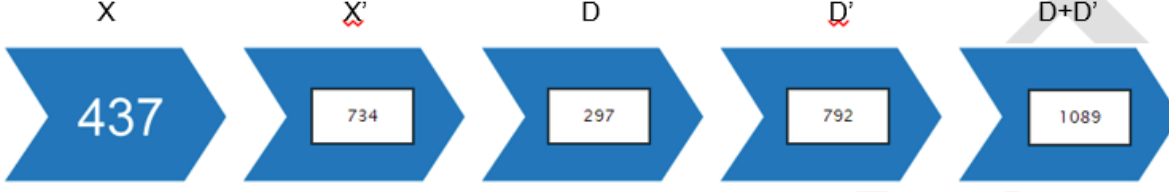

- ECF** applies from one part of a question to a subsequent part of the question and also applies within the same part.
- If an answer resulting from **ECF** is inappropriate (eg, negative distances or $\sin x > 1$) then subsequent marks should not be awarded.
- If a question is transformed by an error into a **simpler question** then **ECF** may not be fully awarded.
- To award **ECF** marks for a question part, **there must be working present for that part**.
- ECF** is only applied to working which is correct. This means that all working subsequent to an error must be checked for accuracy.
- A misread (**MR**) is an error. **ECF** is normally awarded.

General points

- As this is an international examination, **ACCEPT** all alternative forms of **notation**, for example 1.9 and 1,9 or 1 000 or 1.000. However **DO NOT ACCEPT** incorrect mathematical notation e.g x^2 for x^2 in final answers unless noted otherwise in the MS.
- Ignore further working after a correct answer **unless** it indicates a lack of mathematical understanding **i.e. if the further working contradicts the correct answer**, then the last mark cannot be awarded.
- Where candidates have written two solutions to a question, mark the response that deserves more marks.
- In the markscheme, equivalent examples of **numerical** and **algebraic** forms or **simplified** answers will generally be written in the notes preceded by **OE** or equivalent
e.g. $\frac{1}{2}$ or $1/2$ or $1 \div 2$ and $\frac{x}{2}$ or $x/2$ or $x \div 2$
- In the markscheme, information provided in brackets indicate detail that may be seen in a candidate response but is not necessary to award the marks.
- Special case marks **SC** can be allocated instead of but not in addition to the marks prescribed in the markscheme.
- ACCEPT** notation errors in intermediate steps.
- When a calculator screenshot is taken, **ACCEPT** not seeing the whole operation.
- ACCEPT** seeing an equation not in-line.

General note for marking open-ended response questions:

In cases in Task 2 and 3 where the mark scheme is set out in a table then awarding the highest box includes all the lower boxes. So if for example you see at J4 in Task 3 that they have correctly proved their general rule, then J4 is awarded. That is the 4 (full) marks. You don't need to look at the other J criteria. It is probably best to look for the top box answer and if you don't find it look at the next box down. So if they don't get D4 then look at their attempt at a general rule and they might gain D3. If you don't see that look to see if they described a pattern and so on.

		Predictions (P)	Predict correctly one value of A Examples: $r = 25, A = 625\pi$ OR Predict correctly three values of A without corresponding r	Predict correctly three values of A Examples: $r = 25, A = 625\pi$ $r = 30, A = 600\pi$ $r = 35, A = 525\pi$ DO NOT ACCEPT if corresponding r not mentioned		
		Description (D)	Attempt to describe a pattern in words. Examples 1. Increasing then decreasing 2. It is quadratic or parabola EX. Symmetrical	Describe correctly pattern in words Example: A are multiples of 5 OR Attempts to describe radius or diameter of the semicircles as a general rule Ex: $100 - 2r$ or $50 - r$ could be seen in the response, table or diagram	Attempt to describe pattern for A as general rule. Examples: 1. $(A =) 50^2 - r^2 - (50 - r)^2$ 2. $(A =) 50^2 - AC^2 - (50 - AC)^2$ OR Evidence of subtracting two small semicircles/circles from a larger one.	Correctly describe pattern as general rule for A Examples: 1. $A = \pi r (50 - r)$ 2. $A = \pi (50r - r^2)$ 3. $A = \frac{2500\pi}{2} - \frac{\pi r^2}{2} - \frac{\pi(50-r)^2}{2}$ OR the below but award N1 $(A =) \pi r (50 - r)$ $(A =) \pi (50r - r^2)$ the general rule is $\pi r (50 - r)$
		Testing (T)	Attempt to use r from {5,10,15, 20} in their described pattern or general rule	Recognizing that their result is the same as value in table ACCEPT seeing their calculated A value from their general rule and the value in the table being equal even without π		
		Verifying (V)	Attempt to use r other than 5,10,15, 20 in their described pattern or general rule	Calculate correctly their value of A using their r other than 5,10,15, 20 in their general rule	Recognizing that their result is the same as their predicted value ACCEPT seeing their calculated A value from their general rule and their predicted value in the table being equal provided their calculated value includes π	

8	g	Mark	1	2	3	4
		Justify/proof (J)	Attempt to justify their described pattern or rule or general rule Examples 1. Trying at least two values and justifying that they are the same or rule works 2. We always multiply r by the difference between 50 and r 3. The second difference is constant	Good attempt to Justify their general rule Examples: 1. The second difference is constantly 50 2. The equation is quadratic with – ve coefficient of r^2 so increasing then decreasing	Attempt to prove the general rule for the area A Example: Attempt to add areas in terms of r	Correctly prove the general rule for the Area A Example: Adding the areas in terms of r correctly J4 automatically gains T2 and V3
		Notation and terminology (N)	Notation or terminology is correct OR the notation and terminology have significant errors for example 3.14 for pi OR The general rule is correct but not in correct notation $A = 50^2 - r^2 - (50 - r)^2/2$ Ex: The general rule is $\pi(50r - r^2)$	The notation and terminology are correct Note: One minor error, not in general rule, can be overlooked Can be awarded only if they have a general rule ACCEPT the use of x or * for multiplication		
		Communication (L)	Very weak communication Two or three lines of communication OR Only calculations or algebraic steps	Weak communication More than three lines of communication but lack coherence	Good communication More than three lines of coherent communication Can be awarded only if J2 is achieved
