

# **Markscheme**

**November 2019**

**Extended mathematics**

**On-screen examination**

This markscheme is **confidential** and for the exclusive use of examiners in this examination session.

It is the property of the International Baccalaureate and must **not** be reproduced or distributed to any other person without the authorization of the IB Global Centre, Cardiff.

### Error Carried Forward (ECF) marks

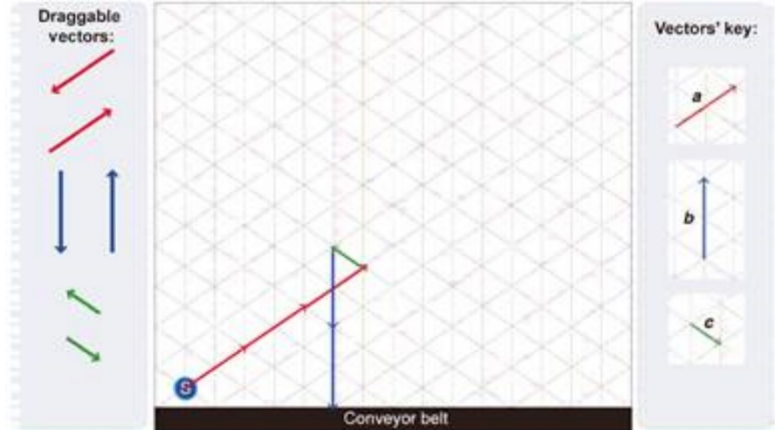

Errors made at any step of a solution affect all working that follows. In general, **Error Carried Forward (ECF)** marks are awarded after an error.

- a) **ECF** applies from one part of a question to a subsequent part of the question and also applies within the same part.
- b) If an answer resulting from **ECF** is inappropriate (eg, negative distances or  $\sin x > 1$ ) then subsequent marks should not be awarded.
- c) If a question is transformed by an error into a **simpler question** then **ECF** may not be fully awarded.
- d) To award **ECF** marks for a question part, **there must be working present for that part**.
- e) **ECF** is only applied to working which is correct. This means that all working subsequent to an error must be checked for accuracy.
- f) A misread (**MR**) is an error. **ECF** is normally awarded.

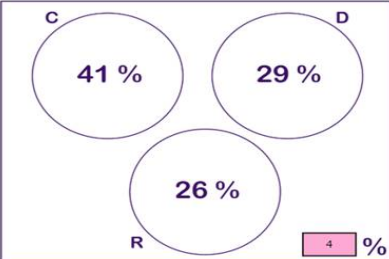

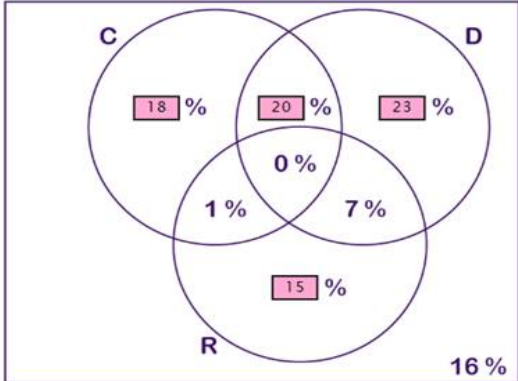

### General points

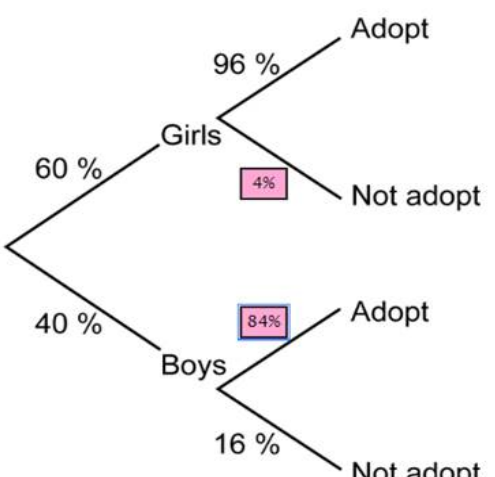

- a) As this is an international examination, accept all alternative forms of **notation**, for example 1.9 and 1,9 or 1 000 or 1.000. However **DO NOT ACCEPT** incorrect mathematical notation e.g  $x^2$  for  $x^2$  unless noted otherwise in the MS.
- b) Accept notation errors in intermediate steps.
- c) Ignore further working after a correct answer **unless** it indicates a lack of mathematical understanding **i.e. if the further working contradicts the correct answer**, then the last mark cannot be awarded.
- d) In the case when a correct result is obtained using incorrect seen method, do not award the mark for the result.
- e) Where candidates have written two solutions to a question, mark the first solution.
- f) In the markscheme, equivalent examples of **numerical** and **algebraic** forms or **simplified** answers will generally be written in the notes preceded by **OE** (or equivalent) e.g.  $\frac{1}{2}$  **OR**  $1/2$  **OR**  $1 \div 2$  and  $\frac{x}{2}$   $x / 2$  **OR**  $x \div 2$
- g) In the markscheme, information provided in brackets indicate detail that may be seen in a candidate response but is not necessary to award the marks.
- h) Special case marks **SC** can be allocated instead of but not in addition to the marks prescribed in the markscheme.
- i) Accept seeing equation not in-line.
- j) Calculator screenshots are accepted as working steps. And when a calculator screenshot is taken, accept not seeing the whole operation.
- k) In task 2 and 3 where the markscheme is set out in a table then, unless noted otherwise, awarding the highest mark in a category includes all the lower marks in that category. It is probably best to look for the top category mark answer and if you don't find it look at the next mark down.
- l) **ACCEPT** using the correct values regardless their previous result

Question		Answers	Notes	Total
1	a	<p><b>AM1 (adding volumes)</b></p> <p>.1 correct Volume for one part</p> <p>.2 correct Volume for second part</p> <p>.3 correctly add their volumes</p> <p><b>AM2 (Subtracting volumes)</b></p> <p>.1 correct volume including empty part</p> <p>.2 correct volume of empty part</p> <p>.3 correctly subtract their volumes</p> <p><b>AM3 (Area x depth)</b></p> <p>.1 correct Area for one part</p> <p>.2 correct Area for the face</p> <p>.3 correctly multiply the total of their areas by 30</p>	<p><b>AM1 (adding volumes)</b></p> <p>.1 <math>50 \times 20 \times 30 (=30000)</math> OR <math>35 \times 20 \times 30 (=21000)</math></p> <p>.2 <math>20 \times 15 \times 30 (=9000)</math> OR <math>40 \times 15 \times 30 (=18000)</math></p> <p>.3 <math>(\text{their}30000 + \text{their}9000)</math> OR <math>(\text{their}21000 + \text{their}18000) = 39000 \text{ (ft}^3\text{)}</math></p> <p><b>AM2 (Subtracting volumes)</b></p> <p>.1 <math>50 \times 40 \times 30 (=60000)</math></p> <p>.2 <math>35 \times 20 \times 30 (=21000)</math></p> <p>.3 <math>(\text{their}60000 - \text{their}21000) = 39000 \text{ (ft}^3\text{)}</math></p> <p><b>AM3 (Area x depth)</b></p> <p>.1 <math>50 \times 20 (=1000)</math> OR <math>20 \times 15 (=300)</math></p> <p>.2 <math>(50 \times 20 + 20 \times 15) = 1300</math></p> <p>.3 <math>(\text{their}1300 \times 30) = 39000 \text{ (ft}^3\text{)}</math></p>	3
	b	<p>.1 correct working step</p> <p>.2 correct sum of employees in working days</p> <p>.3 correct solution of their equation</p>	<p>.1 Ex: setting equation <math>5 \times w + 2 \times 3 = 7 \times 58</math> OR 6 and 406 seen</p> <p>.2 <math>(5w) = 400</math></p> <p>.3 <math>(w =) 80</math></p>	3
	c	<p>.1 correctly substitute their39000 and their80</p> <p>.2 correctly calculate their P after their substitution involving at least one multiplication in numerator</p>	<p>.1 <math>(P =) \frac{(6 \times \text{their}39000 + 500 \times \text{their}80)}{9000}</math></p> <p>.2 their 30(.444...)</p>	2

Question	Answers	Notes	Total
2 a	Correct vectors have been dragged		1
b	.1 correct path in un-simplified form .1 correct path in simplest form	.1 $-2b + 3.5a - 4b$ or $4a - 2b - 0.5a - 4b$ .1 ACCEPT any path starting from M, passing by P and ending at conveyor belt .2 $1.5a - 4b + 4c$ ACCEPT $3.5a - 6b$	2
c	.1 correct working step .2 another correct working step .3 correct answer  Examples can be seen below:  <b>AM1</b> .1 correctly calculate the number of minutes for 4 robots to prepare 300 orders .2 correctly calculate the number of minutes for 1 robot to prepare 300 orders .3 correct answer	.3 24 (min)  <b>AM1</b> .1 60 (min) .2 240 (min) .3 24 (min)	3

	<p><b>AM2</b></p> <p>.1 correctly calculate the number of orders prepared by 1 robot in 3 minutes <b>and</b> 10 robots in 3 minutes</p> <p>.2 correctly calculate the number of orders prepared by 10 robots in 3 minutes</p> <p>.3 correct answer</p> <p><b>AM3</b></p> <p>.1 correctly calculate the number of robots or minutes to prepare 300 orders</p> <p>.2 correctly multiply the number of robots by the correct constant of proportionality</p> <p>.3 correct answer</p> <p><b>AM4</b></p> <p>.1 correctly calculate the number of orders or minutes prepared by 10 robots</p> <p>.2 correctly multiply the number of orders by the correct constant of proportionality</p> <p>.3 correct answer</p> <p><b>AM5</b></p> <p>.1 correctly calculate the number of minutes to prepare 1 order OR finding the number of orders prepared in 1 minute</p> <p>.2 correctly calculate the number of robots or minutes to prepare 300 orders</p> <p>.3 correct answer</p> <p><b>AM6</b></p> <p>.1 correctly calculate the number of orders prepared by 1 robot</p> <p>.2 correctly calculate the number of orders prepared by 10 robots</p> <p>.3 correct answer</p>	<p><b>AM2</b></p> <p>.1 1 robot 3.75 (orders) <b>and</b> 10 robots 37.5 (orders)</p> <p>.2 <math>300/37.5 = 8</math></p> <p>.3 24 (min)</p> <p><b>AM3</b></p> <p>.1 80 (robots) or 60 (min)</p> <p>.2 0.125 or 2.5</p> <p>.3 24 (min)</p> <p><b>AM4</b></p> <p>.1 37.5 (orders) or 1.2 (min)</p> <p>.2 20 or 8</p> <p>.3 <math>(1.2 \times 20 =) 24</math> (min)</p> <p><b>AM5</b></p> <p>.1 0.2 (min) or 5 (orders)</p> <p>.2 60 (min) or 240 (robots)</p> <p>.3 <math>(60/2.5 =) 24</math> (min) OR <math>(1 \times 24 =) 24</math> (min)</p> <p><b>AM6</b></p> <p>.1 3.75 (order)</p> <p>.2 37.5 (order)</p> <p>.3 <math>(3 \times 8 =) 24</math> (min)</p>

	c	<b>AM1</b> .1 correctly calculate the difference of the annual fuel costs .2 divide their result by 1190 .3 correctly write their ratio as percentage	<b>AM1</b> .1 <b>1190 – their 490</b> or <b>their 490 – 1190</b> or 700 .2 $\frac{\text{their 700}}{1190}$ or 0.588235... OE .3 their58.8235... (%) ACCEPT 58.8 or 59 or 60	3

		<b>AM2</b> .1 divide their (7b) by 1190 .2 correctly write their ratio as percentage .3 correctly subtract their result from 100	<b>AM2</b> .1 $\frac{\text{their } 490}{1190}$ .2 their 41.17... .3 $(100 - \text{their } 41.17 \dots) \text{their } 58.8235 \dots (\%)$ ACCEPT 58.8 or 59 or 60	
	d	$T = 490n + 25000$ .1 their 25 000 as the y intercept .2 their 490 as the gradient	ACCEPT $y = 490x + 25000$ , $y = (14000 \times 0.035)x + 25000$	<b>2</b>

7	e		(1 mark)	(2 marks)	10
		Factors (F)	<b>Two</b> factors from: Vehicle cost; ACCEPT Total cost Fuel (cost or usage of per mile) The number of miles driven per year Number of years of ownership or distances travelled maintenance cost or long term cost Effect on the environment	<b>Three</b> factors from: Vehicle cost; ACCEPT Total cost Fuel (cost or usage of per mile) The number of miles driven per year Number of years of ownership or distances travelled maintenance cost or long term cost Effect on the environment	
		Graph (G)	Attempt to plot their $V_A$ line from earlier results Ex: correct slope or T-intercept from their earlier results or At least two points plotted satisfy their earlier results with acceptable accuracy	Correctly plot their $V_A$ line from their earlier results  ACCEPT T-intercept $\in$ <i>their</i> [24000,26000[ and n at intersection $\in$ <i>their</i> [9.5,10.5[	
		Number of years (N)	Attempt to determine after how many years their $V_A$ and $V_B$ will have the same total cost Ex: Attempt to solve simultaneously or trial and improvement OR Correctly calculate the total cost after a specific number of years for both vehicles	Correctly determine after how many years their $V_A$ and $V_B$ will have the same total cost Ex: Correctly calculate $n=$ <i>their</i> 10 after solving simultaneously or trial and improvement OR $n=$ <i>their</i> 10 and their graph intersects at $n=$ <i>their</i> 10	
		Justify (J)	Weak justification Ex: $V_A$ is better for the environment even if its initial cost is more OR $V_A$ is better for the environment AND it will cost less on the long run or overall cost will be less OR	Good justification Ex: $V_A$ is better for the environment AND $V_A$ is better if years of ownership are more than their n at point of intersection or $V_B$ is better if years of ownership are less than their n point of intersection on the graph	

			<p><math>V_A</math> is better for the environment AND a justification matching their graph</p> <p>OR</p> <p><math>V_B</math> is better as their calculations show <math>V_B</math> costs less even if not good for environment</p>		
		Comment on Accuracy (A)	<p>Not very accurate with weak reason.</p> <p>Ex:</p> <p>I rounded the number of years to get the total cost</p> <p>Didn't include other factors of owning a vehicle e.g. running costs</p> <p>OR</p> <p>Accurate with good reason. Ex:</p> <p>The values did not require rounding so the total cost is accurate. The values were whole numbers</p> <p>OR</p> <p>Sensible rounding used</p>	<p>Not very accurate with good reason.</p> <p>Ex:</p> <p>Average mileage 14 000 may vary and will affect the total cost</p>

		<b>Predictions (P)</b>	Correctly predict two terms for $P$ OR Correctly predict 4 terms without square root provided that $\sqrt{2}$ is in their response  ACCEPT whether in the table or in the response box	Correctly predict four terms for $P$  ACCEPT whether in the table or in the response box			
		<b>Description (D)</b>	Attempt to describe a pattern in words for $P$ OR a rule in words Ex: Multiplying by 2 every time Related to powers of 2  <b>OR</b>  Attempt to describe pattern for $P$ as general rule Ex for rule attempt: $2^{n-1}\sqrt{2}$ or $2^{n+1} + D$ $4s + s\sqrt{2}$  <b>OR</b> Correctly describe in words their pattern	Correctly describe one pattern in words for $P$ Ex: The coefficient of $\sqrt{2}$ doubles each time adds to number multiplied by 2  <b>OR</b>  Correctly describe the pattern for $P$ as a general rule Ex: $(P =) 2^{n+1} + 2^{n-1}\sqrt{2}$ OE ACCEPT the general rule completely not simplified	Correctly describe one pattern in words for $P$ Ex: The coefficient of $\sqrt{2}$ doubles each time  <b>AND</b>  Correctly describe the pattern for $P$ as a general rule Ex: $(P =) 2^{n+1} + 2^{n-1}\sqrt{2}$ OE ACCEPT the general rule completely not simplified		
		<b>Testing (T)</b>	Attempt to test their general rule for $P$ using $n \leq 4$ Ex: correctly substitute in their general rule value of $n \leq 4$	Correctly test their general rule for $P$ using $n \leq 4$ Ex:			

			<p><b>OR</b></p> <p>Correctly test their described pattern or their rule (e.g. recursive rule)</p>	<p>Correctly calculate their value for <math>P</math> in their general rule using <math>n \leq 4</math></p> <p><b>AND</b></p> <p>Recognise that their correctly calculated value for <math>P</math> is the same as the given value.</p> <p>ACCEPT seeing their correctly calculated value for <math>P</math> and the given value in the table being equal</p>			
		<b>Verifying (V)</b>	<p>Attempt to verify their general rule for <math>P</math> using <math>n \geq 5</math></p> <p>Ex: correctly substitute in their general rule value of <math>n \geq 5</math></p> <p><b>OR</b></p> <p>Correctly verify their described pattern or their rule (e.g. recursive rule)</p>	<p>Correctly calculate their value for <math>P</math> in their general rule using <math>n \geq 5</math></p>	<p>Correctly calculate their value for <math>P</math> in their general rule using <math>n \geq 5</math></p> <p><b>AND</b></p> <p>Recognise that their correctly calculated value for <math>P</math> is the same as their predicted value obtained by continuing the pattern</p> <p>ACCEPT seeing their correctly calculated value for <math>P</math> and their predicted value in the table being equal</p>		
		<b>Justify/proof (J)</b>	<p>Attempt to justify their described pattern or their general rule</p> <p>Examples: trying at least two more values and arguing as justification that they are the same or rule works</p> <p><b>OR</b></p> <p>It is a geometric sequence or exponential used as justification</p> <p><b>OR</b></p>	<p>Justify their general rule arithmetically</p> <p>Examples: It is a geometric sequence with first term <math>4 + \sqrt{2}</math> and ratio 2</p> <p>Setting equation for a given term and solve it correctly for <math>n</math></p> <p><b>OR</b></p> <p>Attempt to justify their general rule geometrically</p> <p>Ex:</p>	<p>Good attempt to justify the general rule for <math>P</math> geometrically by using incorrect four lengths in terms of <math>n</math></p> <p>Ex: adding incorrect sides in terms of <math>n</math></p> $2^{n+1} + 2^{n+1} + 2^n + 2^{n-1}\sqrt{2}$ <p>OE</p>	<p>Correctly justify the general rule for <math>P</math> geometrically by using correct lengths in terms of <math>n</math></p> <p>Ex:</p> $2^{n-1} + 2^{n-1} + 2^n + 2^{n-1}\sqrt{2}$ <p>or</p> $4(2^{n-1}) + 2^{n-1}\sqrt{2}$ <p>OE</p> <p>J4 automatically gains T2 and V3</p>	

			Recognise that P is the sum of 4S+D used as justification	weak attempt to get perimeter using three lengths in terms of n			
		<b>Notation and terminology (N)</b>	<p>Correct notation of <u>their</u> rule  <b>OR</b>            Correct terminology describing at least one pattern</p> <p>DO NOT ACCEPT if they don't have any rules and they don't describe any patterns</p> <p>ACCEPT  <math>(P =) 2^{n+1} + 2^{n-1} \times \sqrt{2}</math> OE</p>	<p>Correct notation of <u>the general</u> rule for P  <b>OR</b>            The notation of <u>the general</u> rule includes errors <b>AND</b>            Correct terminology describing at least one pattern</p> <p>DO NOT ACCEPT if they don't have a general rule</p>	<p>Correct notation of <u>the general</u> rule for P  <b>AND</b>            Correct terminology describing at least one pattern</p> <p>The general rule:  <math>P = 2^{n+1} + 2^{n-1} \sqrt{2}</math> OE</p> <p>ACCEPT the general rule partially simplified but DO NOT ACCEPT the general rule completely not simplified</p> <p>For notation of general rule,            DO NOT ACCEPT  <math>P = 2^{n+1} + 2^{n-1} \sqrt{2}</math> OE  <math>P = 2^n * 2 + 2^n / \sqrt{2}</math> OE  <math>(P =) 2^{n+1} + 2^{n-1} \times \sqrt{2}</math> OE            The rule for P is <math>2^{n+1} + 2^{n-1} \sqrt{2}</math> OE</p>		
		<b>Communication (L)</b>	<p>Very weak communication</p> <p>Two or three lines of communication</p> <p><b>OR</b></p> <p>Only calculations or algebraic steps</p>	<p>Weak communication</p> <p>More than three lines of communication but lack coherence</p>	<p>Good communication</p> <p>More than three lines of coherent communication</p> <p>Can be awarded only if J2 is achieved</p>		

Predictions

Stage ( $n$ )	Side ( $S$ )	Diagonal ( $D$ )	Perimeter ( $P$ )
1	1	$\sqrt{2}$	$4 + \sqrt{2}$
2	2	$2\sqrt{2}$	$8 + 2\sqrt{2}$
3	4	$4\sqrt{2}$	$16 + 4\sqrt{2}$
4	8	$8\sqrt{2}$	$32 + 8\sqrt{2}$
5	16	$16\sqrt{2}$	$64 + 16\sqrt{2}$
6	32	$32\sqrt{2}$	$128 + 32\sqrt{2}$
7	64	$64\sqrt{2}$	$256 + 64\sqrt{2}$
8	128	$128\sqrt{2}$	$512 + 128\sqrt{2}$
